hello to all

today is Wednesday 9/9/15,

Sims is crushing and spraying water, the wind is out of the south west at 12 mph as indicated by the weather channel and its 87 degrees outside.

now were getting wet with the fluff and its sticking to the tech's, I have engines & transmissions open and apart and there supposed to be dry, with the temp being at 87 degrees we have to close the doors to the service bays just to keep working, my own employees are complaining about the working conditions and WHAT METALS ARE IN THE AIR. We need help now before someone gets sick or hurt.

Attaching this e mail to the Gov. Raimondi hoping for some action on this ongoing problem

iam attaching a copy of a filled complaint from someone at the bus company. I have pile of complaint's filed with DEM if anyone needs copies please call me

thank you

Armand Watts
